SUMMARY

B.Tech Computer Science (AI and ML) graduate with hands-on experience in building full-stack and desktop applications using Java, Spring Boot, React, SQLite, PostgreSQL, Docker, and Electron. Completed a Full Stack Development internship delivering production-style systems with REST APIs, local persistence, and deployment as a Windows installer. Strong foundation in Data Structures and Algorithms, OOP, and MVC architecture. Seeking opportunities in software development and web application development.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript
Frontend: React, HTML, CSS, Bootstrap
Backend: Spring Boot, REST APIs
Databases: PostgreSQL, MySQL, SQLite
DevOps and Desktop: Docker, Docker Compose, Electron, Maven
Version Control: Git, GitHub
API and Testing Tools: Swagger/OpenAPI, Postman
Core Concepts: OOP, Data Structures and Algorithms, MVC Architecture
ML Tools: scikit-learn, pandas, NumPy

EDUCATION

B.Tech in Computer Science and Engineering (AI and ML)
Meghnad Saha Institute of Technology (MSIT), Kolkata | September 2022 – June 2026 | CGPA: 7.86

PROJECTS

E-Commerce Application (Full Stack, Dockerized)
Technologies: Spring Boot 3.1.4, Java 17, React 18, PostgreSQL 15
GitHub: https://github.com/Nikita-929/ecommerce-app

- Designed and developed a full-stack e-commerce system using Spring Boot REST APIs and a React SPA.
- Implemented product, category, and order management using Hibernate/JPA with PostgreSQL.
- Applied Controller–Service–Repository architecture with global exception handling.
- Containerized backend and database using Docker and Docker Compose.
- Documented APIs using Swagger.

Warehouse Management System (Desktop and Web Application)
Technologies: Spring Boot 3.2, Java 17, React 18, SQLite, Electron
GitHub: https://github.com/Nikita-929/warehouse-management-desktop

- Built an offline-first warehouse management desktop application with bundled backend and UI.
- Implemented product CRUD, Excel transaction upload, search, filter, and reporting features.
- Used SQLite for local data persistence.
- Packaged the system as a Windows installer using Electron.
- Added backend health monitoring APIs and frontend error handling using Axios interceptors.

EXPERIENCE

Full Stack Development Intern
ARS Technologies, Kolkata
August 2025 – September 2025

- Developed an offline warehouse management desktop application using Java 17, Spring Boot, React, Electron, and SQLite.
- Designed and implemented REST APIs for product and inventory management.
- Integrated Excel upload functionality and local data persistence.
- Packaged and delivered the system as a Windows installer.
- Implemented health and status monitoring APIs.

CERTIFICATIONS

Supervised Machine Learning: Regression and Classification – DeepLearning.AI

ACHIEVEMENTS AND ACTIVITIES

Participant, Smart India Hackathon 2024 | Participant, SAP Hackfest 2025 | Teaching school-level subjects up to Class 10
